

INTRODUCTORY WORKSHOP

EQUITY DERIVATIVES MARKET

Overview

India's tryst with exchange traded derivatives began in the year 2000 when both NSE & BSE commenced trading in equity derivatives. Since then, equity derivatives trading has come a long way with an exponential increase in total turnover for year 2010-11 to Rs 292,482,215 million from Rs 23,654 million in 2000-01 on NSE only.

This fast paced growth of derivatives market also created the dearth of practically trained derivatives trading professionals and hence emerged the excellent career opportunities for budding professionals in the area of jobbing, trading, research and analysis and other related domains. There is a huge demand for trained and skilled professionals not only having conceptual understanding of the segment, but involved in exploring opportunities for profitable trade using leverage provided by various equity derivatives instruments. This high-end requirement of the industry has inspired us to evolve the training module on basics of derivatives market and help students get acquainted with latest trends in the market and develop a general know-how.

Curriculum

- ✓ Financial Markets in India
- ✓ Derivatives: Futures and Options
- ✓ Practical Application of Futures
- ✓ Clearing, Settlement & Risk Management
